Last Updated Wednesday, 14 October 2009

A new version of Customizetab is available. The plugin uses the latest CB API. So you can use it in J1.0, J1.5 and Mambo (not tested).

What's new:

- you can set a colorpicker, there are three colorpickers available
- now the Customizetab uses Adminmenus, this means you can access the files styles.xml and elements.xml via the CB plugin manager. You can view and edit these files directly in your browser.

If you choose to upgrade please **BACKUP** your elements.xml before beginning the upgrade process!!

Please direct any questions to voodootools via email or in the forums. Thank you.
